AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

1-10 (Cancelled)

11. (withdrawn) A method, comprising:

detecting an incoming telephone call;

detecting a name that is spoken by a caller and automatically recognizing the name;

preventing a plurality of telephones from ringing if said recognized name is not on a predetermined list, otherwise allowing said plurality of telephones to ring; and

wherein said preventing comprises allowing some, but not all, of said telephones to ring, and preventing others of said telephones from ringing.

12. (Cancelled)

13. (Currently Amended) A system, comprising:

a first electronically operated device, receiving a voice to be recognized;

~~a second computer, remote from said first electronically operated device,~~

~~said second computer including automatic voice recognition capability; and~~

Appl. No. : 09/683,600
Filed : January 24, 2002

said first electronically operated device including a ~~a network~~ connection
to a network that extends between said first electronically operated device and
said a second computer,

wherein said first -electronically operated device operates to receive said
voice to be recognized, and to send information indicative of said voice to be
recognized ~~to said second computer~~ over said network, and receive a document
that includes text that represents a result of recognizing said voice to be
recognized, and where said text in said document represents only said voice
having been recognized by ~~said the second computer~~ and does not include
results of recognizing any other voice.

14. (Previously Presented) A system as in claim 13, wherein said
first electronically operated device is included within a portable telephone.

15. (Previously Presented) A system as in claim 13, wherein said first
electronically operated device is included within a personal digital assistant.

16. (Cancelled)

17. (Currently Amended) A system as in claim 13, wherein said text is
displayed on said first computer and includes text indicative of specific words that
represent said spoken voice.

Appl. No. : **09/683,600**
Filed : **January 24, 2002**

18. (Original) A system as in claim 13, wherein said network connection is a connection over an existing telephone line.

19. (Currently amended) A system, comprising:
a first electronic device, having a microphone, and capable of communicating sound received by said microphone;
a computer, remote from said first electronic device;
said first electronic device and said computer having connection capability parts that allow forming a connection between said first electronic device and said computer, said connection using a protocol which does not require a dedicated wire connection between said [[a]] first electronic device and said computer, said connection operative to allow data received from said microphone to be sent from said first electronic device to said computer for processing said data, to produce voice recognized text that is based on only on said data and not on any voices other than those included in said data, and to return said voice recognized text from said computer to said first electronic device, wherein said data is spoken voice requests, said computer recognizes said spoken voice and returns said voice recognized text in a document that represents only said spoken voice to said first electronic device.

20. (Previously Presented) A system as in claim 19, wherein said connection capability parts include parts that allow making a bluetooth connection to send said spoken voice and said recognition information.

Appl. No. : **09/683,600**
Filed : **January 24, 2002**

21. (Previously presented) A system as in claim 19, wherein said connection capability parts include parts that allow making a wireless networking connection.

22. (Previously presented) A system as in claim 19 wherein said computer includes a telephone associated therewith.

23. (Previously presented) A system as in claim 22, further comprising a plurality of said telephones, and said computer commands only certain ones of said telephones to be commanded to communicate, based on applied information.

24. (Currently amended) A telephone system, comprising:
a computer, having a connection capability part that allow forming a connection to a remote part, said connection using a protocol which does not require a dedicated wire connection, said connection operative to allow voice data to be received, to recognize said voice data to produce voice recognition information that is based on said voice data, where said voice data includes only a single voice, and said voice recognition data is based only on said single voice and to return processed information to the remote part, said processed information including document information that is representative of said voice recognition information, and in a form that allows said voice recognition information to be displayed as words that represent said voice data, on said remote part.

25. (Previously presented) A telephone system as in claim 24, wherein said

Appl. No. : **09/683,600**
Filed : **January 24, 2002**

connection capability part is a Bluetooth part.

26. (Previously presented) A system as in claim 19, wherein said document is displayed on a display associated with said first electronic device, and said display includes recognized words representing said spoken voice.

27. (New) A system as in claim 13, further comprising a second computer, remote from said electronically operated device, said second computer connected to said network, and including automatic voice recognition capability.

28. (new) A system as in claim 13, further comprising a digitizing part within said first electronically operated device, which digitizes said voice to be recognized prior to sending it over said network.

29. (new) A system as in claim 19, wherein said first electronic device includes a digitizer, which digitizes said sound received by said microphone prior to sending it to said computer.

30. (New) A system as in claim 24, wherein said computer receives said voice data in a digitized form.
